NAME SALMAN REHMAN

REGNO : 24412

DATE : 5/4/202

TASK: 1

C++ Online Compiler

Courses by Programiz

main.cpp

Share Run

```cpp
#include <iostream>
#include <string>
#include <algorithm>
using namespace std;

int main() {
    string str;
    cout << "Enter a string: ";
    getline(cin, str);

    reverse(str.begin(), str.end());

    cout << "Reversed string: " << str << endl;
    return 0;
}
```

Output

```
Enter a string: hello world
Reversed string: dlrow olleh

=== Code Execution Successful ===
```

TASK: 2

main.cpp

Share Run

```cpp
#include <iostream>
#include <string>
using namespace std;

int main() {
    string str;
    cout << "Enter a string: ";
    getline(cin, str);

    cout << "Total characters: " << str.length() << endl;
    return 0;
}
```

Output

```
Enter a string: HELLO WORLD
Total characters: 11

=== Code Execution Successful ===
```

TASK: 3

C++ Online Compiler

Courses by Programiz

main.cpp

```cpp
#include <iostream>
#include <string>
#include <cctype>
using namespace std;

int main() {
    string str;
    cout << "Enter a string: ";
    getline(cin, str);

    for (int i = 0; i < str.length(); i++) {
        str[i] = toupper(str[i]);
    }

    cout << "Uppercase string: " << str << endl;
    return 0;
}
```

Output

```
Enter a string: hello world
Uppercase string: HELLO WORLD

=== Code Execution Successful ===
```

Task: 4

main.cpp

```cpp
#include <iostream>
#include <string>
using namespace std;

int main() {
    string str;
    cout << "Enter a string: ";
    getline(cin, str);

    if (!str.empty() && str[0] == str[str.length() - 1]) {
        cout << "First and last characters are SAME." << endl;
    } else {
        cout << "First and last characters are DIFFERENT." << endl;
    }

    return 0;
}
```

Output

```
Enter a string: hello world
First and last characters are DIFFERENT.

=== Code Execution Successful ===
```

Task:5

C++ Online Compiler

Courses by Programiz

main.cpp

Share

Run

```cpp
#include <iostream>
#include <string>
using namespace std;

int main() {
    string firstName, lastName;

    cout << "Enter first name: ";
    cin >> firstName;

    cout << "Enter last name: ";
    cin >> lastName;

    string fullName = firstName + " " + lastName;

    cout << "Full Name: " << fullName << endl;
    return 0;
}
```

Output

```
Enter first name: salman
Enter last name: rehman
Full Name: salman rehman

=== Code Execution Successful ===
```
